

Assignment 1: Initial Commit

CS185 Spring 2020

Assigned on March 30, 2020

Due Monday April 6, 2020 by 11:59pm PST

1 Overview

In this assignment, you are expected to get started with an initial setup of your web page and a GitHub repository.

You need to create:

- A basic web page with:
 - A title (on the tab)
 - Page header
 - Main body with an image and text content
- Setup Git and GitHub
 - Create a Github repository and add this repo as remote origin for the project created in Step 1 (All subsequent additions to the website for future assignments will be integrating repo)
 - In addition to master branch, create a secondary branch. This branch will be the working branch which will remain up-to-date with the latest commits.
 - Master branch will be used for assignment submissions. Only the deliverables will be merged from the secondary into the master before assignment deadline.
 - The timestamp of the last merge will be considered as the submission time.
 - For publishing the website follow the below steps:
 - * Go to master branch
 - * Settings → GitHub Pages → Source. Select master branch as the source.
 - * Refresh the page and the website will be published at:
`https://<username>.github.io/<repo-name>/`

2 Deliverables

A basic web page setup using HTML, CSS and the GitHub repository linked to the website project.

3 Submission

Your web pages will be hosted with the code on your master branch, therefore **for the first assignment you need to share your GitHub link with us**. You don't need to submit the link for the rest of the assignments, however you **have to** submit a screenshot of your page for all of the assignments. For this assignment, please submit on **Gauchospace**:

- The link to your **master** branch of your GitHub repository.
- Screenshot of your web-page for the current assignment.

Please make sure you meet the deadline on both your repo, and on Gauchospace. Also if you are not in the US, please be aware of the time differences, the deadlines are set for PST.
